

The United States has been a preferred place for international students who are attracted by the quality of U.S. higher education. There are young adults who want to live the experience of studying in the country, or some might remain in the country after the completion of college since they would seek a better future because the limited opportunities their country provides are lower than the ones North America can offer. Coming to the U.S. to study has a great impact on the international labor market, and international student enrollment plays an important role in the education industry. The institutions could benefit from international students in a wide variety of different ways including increased enrollment, visibility in other countries, and diversity of perspectives in the classroom. When traveling to the United States, international students may face a few difficulties. These challenges may have an impact on several faces of their social, personal, and academic experiences. The purpose of this research project is to investigate the ways in which immigration laws impact the experiences and general well-being of international students, as well as their capacity for learning, psychological stability, social integration, and general contentment.
